

# REGENYAL

## face & body cream

**BIO-REVITALIZING CREAM**

FACE AND BODY

□□■  
with  
HYALURONIC ACID  
and P.A.F.

FACE CREAM - 50 ml tube | BODY CREAM - 150 ml tube

The skin represents a natural barrier between the body and the surrounding world, and is therefore subject to exogenous (sun, smoke, atmospheric agents, pollution) and endogenous (stress, eating habits, hormones) phenomena each day.

A healthy skin is an important condition for staying physiologically "young", both in terms of looks and functions.

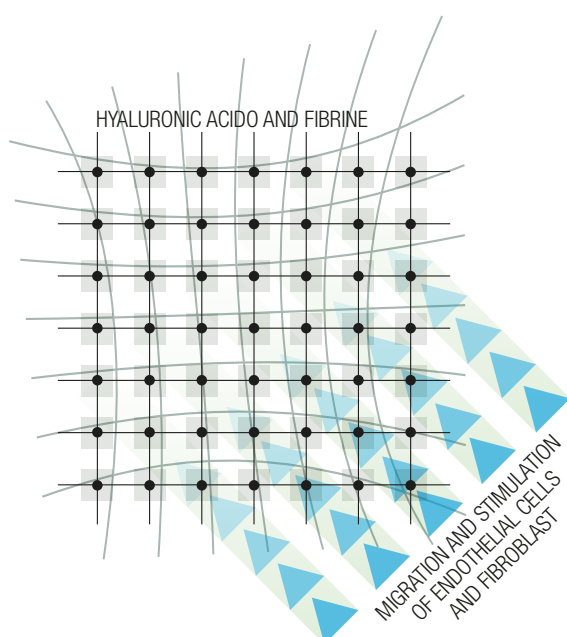

This is why it is recommended to use Regenyal Cream, - the result of an advanced research in the field of dermo-cosmetics.

The Regenyal Face and Body creams help to balance the derma and prevent desquamation and chapping.

*The formula of the Regenyal Cream is characterized by two exclusive ingredients: Hyaluronic Acid and the P.A.F.*

## Hyaluronic Acid

The Hyaluronic Acid is of great importance to the skin health because it intervenes in the creation of granulation tissues, in the epithelisation and bio-stimulation processes.

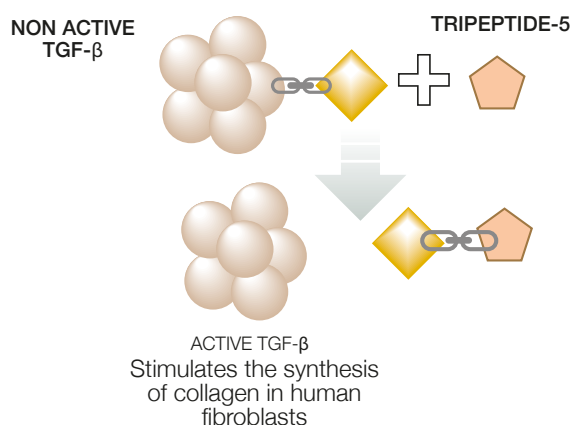

## P.A.F. polyvalent anti-aging factor

The P.A.F. (polyvalent anti-aging factor) is a compound based on various active principles: **Palmitoyl Tripeptide-5**, **Alga Dunaliella Salina**, **Calendula**, **Arnica**, **Bisabolol**, **Melatonin** and **Vitamin E**.

It is important because it influences the endogenous synthesis of collagen, provides essential nourishment elements to the skin (aminoacids, vitamins and minerals), strengthens cellular vitality and turnover, protects and stimulates the mitochondria (cellular energy plants).

## □□■ PALMITOYL TRIPEPTIDE-5

The **Palmitoyl Tripeptide-5** is a small peptide that acts like the **Trombospondin I** – a multi-functional protein that activates the **TGF-β** (Tissue Growth Factor). The latter is a key element in the synthesis of collagen, because it binds a specific sequence of the Trombospondin molecule. This sequence is similar to the one of Palmitoyl Tripeptide-5, that has the same ability in activating the TGF-β.

## □□■ DUNALIELLA SALINA

Is an alga native to saline lakes, precious for its resistance to high osmotic pressure and to high UV and oxygen levels. The protection and stimulation of the mitochondrial activity of the epithelial tissue cells greatly benefit from this ingredient. This fact and the anti-oxidant properties of Dunaliella Salina are the reason that this alga is very often implemented in cosmetics.

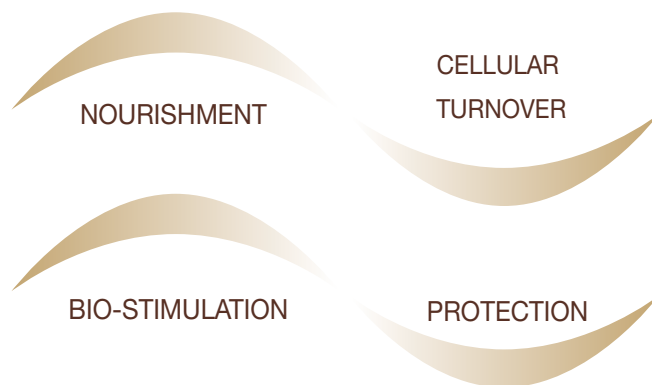

## □□■ CALENDULA - ARNICA AND BISABOLOL

Contribute to the maintenance of capillary integrity and to the prevention of erythema.

## □□■ MELATONIN - VITAMIN E

Perform a scavenger action.

Regenyal Cream is a cure-all for the beauty and wellbeing of the skin

Properties of the Regenyal **Face** and **Body** creams:

**ENERGIZING** stimulates the mitochondrial activity of the dermal cellular root

**NOURISHING** supports the fibroblast efficiency in the synthesis of new collagen

**FIRMING** and **TONING** makes the tissues more tonic and helps to prevent wrinkles

**MOISTURIZING** nourishes the skin, facilitates regenerating processes and combats free radicals

Can be used every day to keep the skin healthy and elastic; especially indicated in case of dermo-aesthetic pre and post-treatments (peelings, injections, etc.).
